

Vehicle Delivery Safety Checklist

Syed Motors · Document Code: SAFE-02 · Type: safety · Department: Sales

Purpose

Safety-related items that must be explained to the customer at the point of delivery, and the environmental orientation of the vehicle.

Effective from the first working day of the current calendar year. Reviewed annually by the document owner and revised as necessary. Version 1.0.

1. Seatbelt and Airbag

The advisor demonstrates seatbelt use for driver and each passenger seat, points out airbag positions, and warns against fitting after-market seat covers over side airbags.

The delivery explanation should be conducted as part of the customer handover. The advisor should demonstrate the basic seatbelt arrangement rather than assuming that the customer already knows how the vehicle's belts should be used.

The advisor should identify the airbag positions in the vehicle so the customer can understand where the restraint system is located. The warning concerning after-market seat covers is specifically connected to side airbags and should be communicated clearly during delivery.

The purpose of this part of the checklist is to make the customer aware of the vehicle's restraint features before leaving the branch.

2. Child Restraint

For customers with children, the advisor explains ISOFIX anchor positions and cautions against front-seat child placement in vehicles with active passenger airbags.

This explanation is conditional on the customer having children. Where it applies, the advisor should identify the ISOFIX anchor positions and explain their location during the delivery orientation.

The advisor should also communicate the caution concerning front-seat child placement in vehicles with active passenger airbags. This is an important part of the child-restraint explanation and should not be omitted when the condition applies.

1. Seatbelt and Airbag - Delivery Demonstration

The seatbelt and airbag section establishes the basic safety orientation that the customer receives when the vehicle is delivered. It covers three connected actions: demonstrating seatbelt use, identifying airbag positions, and explaining the restriction concerning after-market seat covers over side airbags.

Driver seatbelt. The advisor demonstrates seatbelt use for the driver. This gives the customer a practical reference for the restraint system rather than limiting the delivery explanation to verbal information.

Passenger seats. The advisor also demonstrates seatbelt use for each passenger seat. The checklist therefore covers the driver and each passenger position rather than only the driver's seat.

Airbag positions. The advisor points out the airbag positions. This allows the customer to understand where airbags are located within the vehicle and connects the explanation to the seating positions covered during the demonstration.

Side-airbag seat-cover warning. The advisor warns against fitting after-market seat covers over side airbags. The warning is specifically about seat covers that could interfere with the area containing side airbags.

Delivery Communication

The delivery orientation should be understandable to the customer and connected to the actual vehicle being handed over. The advisor should use the vehicle's seating positions and visible interior features while explaining the relevant safety items.

The checklist focuses on explanation at the point of delivery. It is therefore not simply a list of technical features; it identifies safety information that the customer should receive before taking the vehicle.

2. Child Restraint - Conditional Explanation

The child-restraint section applies for customers with children. The advisor explains the ISOFIX anchor positions and communicates the caution concerning front-seat child placement where the vehicle has active passenger airbags.

2. Child Restraint - Customer Orientation

The child-restraint portion of the delivery checklist is intended to make the customer aware of the vehicle's relevant child-restraint locations and the stated passenger-airbag caution.

ISOFIX anchor positions. The advisor explains where the ISOFIX anchors are located. The customer should be shown the relevant positions in the actual vehicle so that the explanation is tied to the vehicle being delivered.

Front-seat caution. The advisor cautions against front-seat child placement in vehicles with active passenger airbags. This caution is part of the required explanation when the customer has children.

The checklist does not replace any separate child-restraint instructions supplied with the vehicle. Its stated purpose is to ensure that the advisor explains the identified safety-related items during delivery.

Delivery Situations

The advisor should identify whether the child-restraint section applies during the delivery discussion. If the customer has children, the ISOFIX and passenger-airbag points should be included in the safety orientation.

The section is deliberately conditional. The checklist does not state that every customer must receive the child-specific explanation regardless of circumstances.

3. Emergency Kit

The advisor walks the customer through the location of the warning triangle, first aid kit, spare wheel, tools, and jack.

The emergency-kit orientation gives the customer a practical understanding of where the listed items are located in the delivered vehicle. The advisor should identify each item rather than assuming that the customer will locate it later.

Warning triangle. The advisor points out the location of the warning triangle.

First aid kit. The advisor identifies where the first aid kit is located.

Spare wheel. The advisor shows the location of the spare wheel.

Tools. The advisor identifies the location of the vehicle tools.

Jack. The advisor shows the location of the jack.

3. Emergency Kit - Vehicle Orientation

The emergency-kit section is intended to make the customer familiar with the basic emergency-related items supplied or located with the vehicle. The advisor's role is to walk the customer through their locations during delivery.

Showing the locations during the handover reduces the need for the customer to search for these items later. The explanation should therefore be based on the actual vehicle rather than a generic description.

The warning triangle, first aid kit, spare wheel, tools, and jack should each be identified as part of the delivery walkthrough. The checklist groups these items together because they are all relevant to the customer's awareness of the vehicle's emergency equipment and related tools.

Point-of-Delivery Flow

The safety orientation can be understood as a short sequence during the vehicle handover. First, the advisor demonstrates the restraint features, including seatbelts and airbag positions. Next, where the customer has children, the advisor explains the child-restraint points and the stated passenger-airbag caution. The advisor then walks through the emergency-kit locations.

This sequence keeps the safety explanation connected to the vehicle and gives the customer a structured introduction to the safety-related items identified by SAFE-02.

Customer Understanding

The checklist is focused on explanation rather than repair or technical servicing. The advisor should therefore use clear, practical demonstrations and point to the relevant vehicle locations during the handover.

The safety orientation should cover the items specified in this document. The advisor should not replace the stated checklist points with unrelated delivery information.

Relationship to Sales Delivery

SAFE-02 belongs to the Sales department and applies at the point of vehicle delivery. It complements the normal customer handover by identifying specific safety information that the advisor must explain before the customer leaves with the vehicle.

Vehicle Delivery Safety Reference

SAFE-02 establishes the safety-related customer orientation required at the point of vehicle delivery at Syed Motors. The checklist covers seatbelts and airbags, child restraint information for customers with children, and the location of emergency-related vehicle items.

1. Seatbelt and Airbag

The advisor demonstrates seatbelt use for the driver and each passenger seat, points out airbag positions, and warns against fitting after-market seat covers over side airbags.

2. Child Restraint

For customers with children, the advisor explains ISOFIX anchor positions and cautions against front-seat child placement in vehicles with active passenger airbags.

3. Emergency Kit

The advisor walks the customer through the location of the warning triangle, first aid kit, spare wheel, tools, and jack.

Point-of-Delivery Checklist

Seatbelts: Demonstrate driver and passenger-seat use.

Airbags: Point out airbag positions and provide the side-airbag seat-cover warning.

Children: Where applicable, explain ISOFIX anchor positions and the stated passenger-airbag caution.

Emergency items: Show the locations of the warning triangle, first aid kit, spare wheel, tools, and jack.

Approval and Ownership

This document is owned by the Sales department and approved by the Branch Manager. Questions or clarifications should be directed to the document owner. Non-compliance is a disciplinary matter under the HR Policy Manual.
