

Warranty Claim Processing SOP

Syed Motors · Document Code: SOP-04 · Type: sop · Department: Service

Purpose

The process the warranty administrator follows to file a warranty claim with the OEM and reconcile reimbursement.

Effective from the first working day of the current calendar year. Reviewed annually by the document owner and revised as necessary. Version 1.0.

1. Claim Initiation

Once the technician confirms a failure is warrantable, the warranty administrator opens a claim on the OEM warranty portal within 48 hours of the job-card closure. Delayed submissions beyond 15 days are auto-rejected by the OEM.

The claim process therefore begins after the technician has confirmed that the failure is warrantable. The warranty administrator is responsible for moving the claim into the OEM warranty portal within the required submission window.

The 48-hour requirement is measured from job-card closure. The SOP also identifies a 15-day boundary beyond which delayed submissions are auto-rejected by the OEM.

2. Documentation

Every claim must include the job-card, photos of the defective part, VIN, mileage, technician diagnosis, and the parts requisition. The failed part is tagged and stored in the warranty rack for OEM audit.

The documentation package connects the warranty claim to the underlying service work. The job-card provides the service record, while the photographs and failed part provide supporting evidence for the defective component.

VIN and mileage identify the vehicle and its recorded usage, while the technician diagnosis explains the identified failure. The parts requisition provides the associated parts record.

3. Reimbursement

The OEM reconciles claims monthly. The finance team credits the warranty reimbursement into the branch P&L.; Rejected claims must be re-analysed with the workshop supervisor and either resubmitted with additional evidence or written off as commercial goodwill.

1. Claim Initiation - Process Flow

The warranty claim process starts with the technician's confirmation that a failure is warrantable. This confirmation is the trigger for the warranty administrator to begin the claim submission process.

Step 1: Technician confirmation. The technician confirms that the failure is warrantable.

Step 2: Job-card closure. The job-card provides the reference point for the administrator's submission timing.

Step 3: Portal submission. The warranty administrator opens the claim on the OEM warranty portal within 48 hours of job-card closure.

Submission boundary. Delayed submissions beyond 15 days are auto-rejected by the OEM.

Timing and Responsibility

The warranty administrator owns the submission activity described in this section. The technician's role is to confirm the warrantable failure, while the administrator moves the claim into the OEM portal.

The two timing references in the SOP should be kept distinct. The administrator is required to open the claim within 48 hours of job-card closure, while the OEM's stated auto-rejection condition applies to delayed submissions beyond 15 days.

Claim Record

The claim should remain connected to the underlying job-card and supporting evidence. This allows the warranty activity to be traced back to the service work that produced the claim.

2. Documentation - Required Evidence

The SOP specifies six items that every warranty claim must include. These items collectively establish the service history, vehicle identity, technical diagnosis, and parts information associated with the claim.

Job-card. The job-card connects the claim to the completed service work.

Photos of the defective part. Photographs provide visual evidence of the defective component.

VIN. The vehicle identification number identifies the vehicle associated with the warranty claim.

Mileage. The recorded mileage provides the vehicle usage information required by the claim.

Technician diagnosis. The technician's diagnosis documents the identified failure and supports the warrantability decision.

Parts requisition. The parts requisition records the parts information associated with the service work.

Failed Part Control

The failed part is tagged and stored in the warranty rack for OEM audit. The physical failed part therefore remains part of the supporting warranty evidence rather than being treated as an ordinary workshop item.

The tagging and storage requirement supports the audit purpose stated in the SOP. The part can be associated with the claim and retained for review by the OEM.

Evidence Completeness

The claim documentation should be treated as a complete evidence package. Missing elements can make it harder to connect the claim to the vehicle, service event, diagnosis, or defective component.

3. Reimbursement - Reconciliation

The OEM reconciles claims monthly. After this reconciliation, the finance team credits the warranty reimbursement into the branch P&L.;

The reimbursement stage connects the service department's warranty activity with the branch's financial records. The warranty administrator and service team handle the claim process, while finance records the reimbursement in the branch P&L.;

Rejected Claims

A rejected claim does not simply end the process. The SOP requires rejected claims to be re-analysed with the workshop supervisor.

Following re-analysis, the claim has two stated paths: it may be resubmitted with additional evidence, or it may be written off as commercial goodwill.

Re-analysis. The workshop supervisor participates in reviewing the rejected claim.

Resubmission. Where additional evidence supports the claim, the claim may be resubmitted with that evidence.

Commercial goodwill. Where the claim is not resubmitted, the SOP provides for it to be written off as commercial goodwill.

Departmental Handoffs

The process involves distinct responsibilities. The technician confirms the warrantable failure, the warranty administrator submits the claim, the workshop supervisor participates in rejected-claim analysis, and the finance team records reimbursement in the branch P&L.;

Traceability

The required claim documents, tagged failed part, OEM portal activity, monthly reconciliation, and finance credit together provide the main records through which the warranty process can be followed.

Warranty Claim Processing Quick Reference

SOP-04 establishes the Service department process for filing warranty claims with the OEM and reconciling reimbursement at Syed Motors.

1. Claim Initiation

After the technician confirms a failure is warrantable, the warranty administrator opens a claim on the OEM warranty portal within 48 hours of job-card closure. Delayed submissions beyond 15 days are auto-rejected by the OEM.

2. Documentation

Every claim includes the job-card, photos of the defective part, VIN, mileage, technician diagnosis, and parts requisition. The failed part is tagged and stored in the warranty rack for OEM audit.

3. Reimbursement

The OEM reconciles claims monthly. Finance credits warranty reimbursement into the branch P&L.; Rejected claims are re-analysed with the workshop supervisor and either resubmitted with additional evidence or written off as commercial goodwill.

Approval and Ownership

This document is owned by the Service department and approved by the Branch Manager. Questions or clarifications should be directed to the document owner. Non-compliance is a disciplinary matter under the HR Policy Manual.
