

Audit Trail

Sarmad Motors Pakistan (Pvt) Ltd

Purpose

Every mutating request in SkillSprint is written to the audit log with user, action, entity type, entity id, before-state (if applicable), after-state (if applicable), IP address and timestamp.

Why this matters

Onboarding data is sensitive - roles, plans, quiz results, assessment scores all feed into HR decisions. Auditability is what protects both the company (in a compliance audit or a dispute) and the employee (against unrecorded changes to their record).

Audit-log field list

- **user_id** - which user performed the action.
- **action** - create, update, delete, generate, validate, review, regenerate.
- **entity_type** - user, job_role, document, requirement, role_requirement, plan, review, generation_run.
- **entity_id** - the affected record.
- **before_state** and **after_state** - JSON blobs for update actions.
- **ip_address** and **user_agent**.
- **timestamp** - server time in UTC.

Retention

Audit entries are retained for seven years to satisfy tax, warranty and OEM audit obligations. Deletion of audit entries is not supported through any endpoint.
