

Progress

Sarmad Motors Pakistan (Pvt) Ltd

Purpose

The Progress module tracks each employee's advancement through their onboarding plan - module completion, quiz scores, assessment scores, weak areas and overall percentage. Progress is measured against due stages defined per requirement.

Why this matters

Onboarding is not one-shot; it is a 30/60/90-day journey. Progress converts each learner's raw activity into a single number the branch manager can look at during Monday reviews.

Signals

- **Overall percent complete** - weighted by requirement priority.
- **Weak areas** - modules or requirements where the learner's quiz score fell below 60 percent.
- **SLA state** - one of on_track, behind_schedule, at_risk. Based on the current date versus the due-stage of each requirement.
- **Assessment rubric scores** - weighted rubric of demonstrated competencies scored by the supervisor.

Adaptive Recommendations

For every weak area, the deterministic recommendation engine picks a follow-up module from the corpus and inserts it into the learner's plan. The engine is rule-based, not AI - the recommendation is always traceable to a corpus document.
