

Assessments

Sarmad Motors Pakistan (Pvt) Ltd

Purpose

An assessment is a weighted rubric attached to a module. The rubric is a list of competencies, each with a weight and a scored level. The supervisor scores the learner against the rubric, and the module's assessment score is the weighted mean.

Why this matters

Some things cannot be graded by an auto quiz - the walk-around a service advisor does with a customer, the way a technician diagnoses a fault. Assessments are how those practical judgements enter the plan.

Example rubric - Sales Executive walk-in handling

Competency	Weight	Scoring
Greeting and identification of customer need	0.20	0 to 5
Product demonstration accuracy	0.30	0 to 5
Handling of objections	0.20	0 to 5
Financing conversation	0.15	0 to 5
Follow-up commitment and DMS logging	0.15	0 to 5

Every rubric row is source-cited back to the relevant document (SOP or role description). Weighted mean less than 3.5 sends the learner into recommended remedial modules.
