

Policy Impact (Change Propagation)

Sarmad Motors Pakistan (Pvt) Ltd

Purpose

When a document is superseded by a new version, the Policy Impact module identifies every plan that cites the old version and marks them as `impact_flagged`. The reviewer decides whether to regenerate those plans, patch them, or accept as-is.

Why this matters

A dealership updates its policies every few months - OEM standards revision, HR policy update, safety rule change. Without impact tracking, plans sitting with employees quietly reference obsolete rules.

Steps

- Admin uploads a new version of an existing document keeping the same `doc_code`.
- The system diff-compares the old and new versions and identifies changed sections.
- Every plan citing any changed section is flagged.
- Admin sees a list of affected plans grouped by employee and role, and can select regeneration in bulk or per plan.
- Regenerated plans replace the old ones; the audit trail keeps a link to the superseded version.
